

Hi MetaMask team,

I'm applying for the Lead Product Designer role on Prediction Markets because the core challenge is one I work on every day: making financial mechanics that feel intimidating clear enough that people act with confidence.

At Integritas I design and specify digital banking for US credit unions and a Brazilian federal bank, covering payments, PIX, Open Finance, lending and account management. Each flow has its own rules and risks, and my job is to hide the complexity without hiding what matters to the user's decision. Before that, I redesigned the interfaces and processes of Brazil's largest microcredit program, used by more than 2 million people, many of them new to digital finance.

I'm comfortable taking an ambiguous product from early thinking to launch. As UX Tribe Lead at Intmed I set the discovery process for 10 squads and designed an emergency triage system that is now used in more than 150 hospitals. I also prototype fast with AI and code tools such as Claude Code, Codex, Google AI Studio and Figma Make, so ideas get tested before they get expensive.

Prediction markets are new territory for me, and that's part of the appeal. I'd bring a strong fintech foundation, careful interaction craft and a habit of testing with real users.

I'm based in Brazil (GMT-3) and work in English with US teams daily. My portfolio is at studiodito.co.

Best,
Espedito Roza
